

KINETIC POWER

With no end in sight to the steady growth of smart devices, wearables, streaming services and the Internet of Things (IoT), today's modern data centers and server rooms are expected to remain up and running without any interruption to service or power. Yet with research showing that more than 50 percent of power interruptions are caused by problems with lead-acid batteries, including faults and end of discharge issues, there's simply no excuse for not having uninterruptible power systems installed in your data centers by a professional like Kinetic Networks.

Data Center Power Distribution Systems

It should be clear that as your data center and IT requirements become ever more demanding and dynamic, your need for continuity and reliability in your power supply also becomes greater. And the only foolproof way to ensure that your power distribution system is fast, robust and fully up to the task at hand is to have it designed, installed and maintained by our professional power solution services.

Benefits:

- **Improved reliability and Uptime**
- **High efficiency UPS options**
- **Cost Reduction**
- **Lithium-Ion battery UPS**
- **Remote power management**
- **Battery recycling**

Features and services:

- **Automatic Transfer Switch (ATS) installation and service**
- **Power Generator and UPS service**
- **Battery supply, maintenance and replacement**
- **Power solution design services**
- **Inverter supply and maintenance**
- **Rack Power Distribution Unit (PDU) distribution and smart options**
